Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDS 1057416-1061255, and 114484-1145351).

                                                                                                                                                                                                                                       Cell-cycle regulatory protein p16 cDNA.
Cell-cycle regulatory protein p16; cyclin-dependent kinase inhibitor;
CCR; gene therapy; transgenic animal; cancer; cell proliferation;
SS; d8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cell cycle regulating proteins bind to cyclin dependent kinase and related nucleic acids, antibodies etc., used in diagnosis and the related nucleic acids, antibodies etc., used in diagnosis and the abnormal cell proliferation, degeneration etc.

Claim 43: Page 76-77: 109pp: English.

CDNA (102962) coding for the human cell-cycle regulatory (CCR) protein p16 (R85116) was isolated using a 2-hybrid screening assay in Saccharomyces cerevisiae. The p16 gene was mapped to chromosome 9pp1-22. The isolated cDNA can be used: to detect mutations in CCR genes that lead to cell proliferation; to breed transgenic animals to study cellular disorders involving CCR allele mutation/misexpression; and to correct CCR deficient cells (gene therapy).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ë
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63

This is the nucleotide sequence of the multiple tumour suppressor I
This is the nucleotide sequence of the multiple tumour suppressor I
(MTS-1) gene, used in the method of the invention. The MTS gene
is useful in the diagnosis and prognosis of human cancer, e.g. by
standard nucleic hybridisation techniques, of patient samples. The
mutated sequences are those that are present in somatic mutations
of the gene in cancers. The vectors can be used for gene therapy
strategies to replace function of mutated protein in patients. These
can also be used to construct protein minetics, also for therappeutic
strategies. In addition the expression constructs can also be used
for recombinant production of MTS. Recombinant MTS can be used to
conserve in addition the expression constructs can also be used
for recombinant production of MTS. Recombinant MTS can be used to
conserve in addition the sectore MTS function in a cell.
Itself may also be used to restore MTS function in a cell.
                                                                                                                                                                                                                                                                                                                                                    P-PSDB; W4549.
Nucleic acids based on multiple tumour suppressor, MTS, sequences useful as hybridisation probes, primers and recombinant production of MTS in the diagnosis and treatment of cancers related to MTS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       201 CGCGGAGCCCAACTGCGCCCAACCCCGCCACTCTCACCCGACCCGTGCACG 250

         CDS
         mutation(s) and their treatment
Disclosure; Column 61-62; 72pp; English.
This oDNA sequence encodes a human multiple tumour suppression protein,
MTS1. The MTS gene locus is also referred to as the familial melanoma
(MLM) gene locus, located on human chromosome 9p21. Germ line mutations
in MTS genes can be used in the diagnosis of predisposition to cancers,
e.g. melanoma, leukaemia, astrocytoma, gliboblastoma, lymphoma, glioma,
Hoddkin's lymphoma, CLL, and cancers of the pancreas, breast, thyroid,
ovary, uterus, testis, kidney, stomach and rectum.

Human mutant multiple tumour suppressor gene sequences - for production of recombinant mutant polypeptide(s) Claim 1; Columns 87-90; 72pp; English.
The present sequence the human multiple tumour suppressor gene 1 (MTS1), useful in cancer diagnosis.
Sequence 947 BP; 207 A; 271 C; 274 G; 195 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10-SEP-1997 (first entry)

The present sequence encodes a human multiple tumour suppressor I (MTSI) protein. The sequence is homologous to the corresponding murine gene. Primers designed from the gene can be used to design primers to detect abnormalities i.e. polymorphisms which may predispose towards malignancies such as melanoma, leukaemia, astrocytoma, lymphoma, glioma, as well as tumours of e.g. the breast, thyroid, pancreas, uterus and kidneys.

DNA specific for Multiple Tumour Suppressor IEI-beta gene - are useful for the diagnosis of cancers related to MTSIE1-beta multation(s) and their treatment
Disclosure; Column 89-90; 72pp; English.
This CDNA sequence encodes a variant of the human multiple tumour suppression protein, MTSI. The MTS gene locus is also referred to as the familial melanoma (MLM) gene locus, located on human chromosome 9p21.
Germ line mutations in MTS genes can be used in the diagnosis of predisposition to cancers, e.g. melanoma, leukaemia, astrocytoma, gliboblastoma, lymphoma, glioma, Hodgkin's lymphoma, CLL, and cancers of the pancreas, breast, thyroid, ovary, uterus, testis, kidney, stomach and rectum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-DEC-1998 (first entry)
Coding sequence 3 of the multiple tumour suppressor 1.

Claim 1; Fig 17, 73pp; English.

Claim 1; Fig 17, 73pp; English.

Claim 1; Fig 17, 73pp; English.

This is the nucleic Agequence of the invention. The MTS gene used in the method of the invention. The MTS gene is useful in the diagnosis and prognosis of human cancer, e.g. by standard nucleic hybridisation techniques, of patient samples. The standard nucleic hybridisation techniques, of patient samples. The vertors can be used for gene therapy is strategies to replace function of mutated protein in patients. Thase can also be used to construct protein mimetics, also for therapeutic strategies. In addition the expression constructs can also be used for recombinant production of MTS. Recombinant MTS can be used to screen for drugs to be used for cancer therapy, and the protein cancer for drugs to be used for cancer therapy, and the protein a call.

```
The present sequence represents the cDNA sequence for a human multiple tumour suppressor 1 (MTS1) gene, including noncoding portions. The gene can be used to design primers to detect abnormalities 1.e. polymorphisms which may predispose towards malignancies such as melanoma, leukaemia, astrocytoma, lymphoma, glioma, as well as tumours of e.g. the breast, thyroid, pancreas, uterus and kidneys.

Sequence 947 BP; 207 A; 271 C; 274 G; 195 T;

PR CALLOLAR Sequence represents the codding sequence for the tumour suppressor.

PR CALLOLAR Sequence is joined to a promoter functional in eukaryotic cells.

PR CALLOLAR Sequence is joined to a promoter functional in eukaryotic cells.

PR CALLOLAR Sequence or interaction is involved in the control of cyclin-dependent.

A Inhabitory subunit, which is involved in the control of cyclin-dependent.

CALLOLAR SEQUENCE OF the encoded protein, cancer cells can be detected. When the nucleic acid molecule is in the sense orientation, the expression construct can be used to restore p16 function in a cell, particularly by construct can be used to restore p16 function in a cell, particularly by construct the molecule is in the sense orientation, the concern or melanoma. It may also have anti-angiogenic activity.

                                              Claim 60; Page 84-85; 88pp; English.

Claim 60; Page 84-85; 88pp; English.

The invention relates to novel inhibitors of cyclin-dependent kinases

The invention relates to novel inhibitors of cyclin-dependent kinases

CDKs), particularly CDK/cyclin complexes. It provides a recombinant

transfection system (A) that comprises: (I) first gene construct

comprising a sequence encoding an inhibiting activity of a CDK,

linked to a transcription regulator functional in enkaryotic cells; (ii)

second gene construct comprising a sequence encoding a polypeptide that

promotes endothelialisation, and (iii) a gene delivery composition for

delivering the GCs to a cell for transfection. Also provided are nucleic

collinear process when FP enter the cell, and (ii) a therapeutic

collular process when FP enter the cell, and (ii) a transcellular

collular process when FP enter the cell, and (ii) a transcellular

consists of at least one CDK-binding moutlf and a TCP, See X26220 for

consists of the recombinant transfection system. The present
 for treatment of, e.g. vascular injury, cancers,

fibrosis and neurodegeneration

Staim 60, Page 85; 88pp; English.

Claim 60, Page 85; 88pp; English.

Comprising a sequence encoding an inhibitory polypeptide containing at comprising a sequence encoding an inhibiting activity of a CDK, linked to a transcription regulator functional in eukaryotic cells; (ii) casecond gene construct comprising a sequence encoding a polypeptide that promotes endothelialisation, and (iii) a gene delivery composition for delivering the GCs to a cell for transfection. Also provided are nucleic collivering the GCs to a cell for transfection. Also provided are nucleic collular process when FP enters the cell, and (ii) a transcellular collular process when FP enters the cell, and (ii) a transcellular collular process when FP enters the cell, and (ii) a transcellular consists of at least one CDK-binding motif and a TCP. See x26220 for consists of at least combinant transfection system. The present
                                                                                            25-MAY 1999 (first entry)
Truncated p27/p16 fusion protein encoding DNA.

Clooks), particularly CDK/cyclin complexes. It provides a recombinant
transfection system (A) that comprises: (I) first gene construct
comprising a sequence encoding an inhibitory polypeptide containing at
comprising a sequence encoding an inhibitory polypeptide containing at
comprising a sequence encoding an inhibitory polypeptide that
comprising a sequence construct comprising a sequence encoding a polypeptide that
construct comprising a sequence encoding a polypeptide that
promotes endothelialisation, and (iii) a gene delivery composition for
collular process when FP enters the cell, and (ii) a therapeutic
collular process when FP enters the cell, and (ii) a transcellular
consists of at least one CDR-binding motif and a TCP. See x2620 for
consists of at least one CDR-binding motif and a TCP. See x2620 for
detailed uses of the recombinant transfection. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Truncated p27/pl6 fusion protein encoding DNA.

Truncated p27/pl6 fusion protein encoding DNA.

Truncated p27/pl6 fusion protein encoding DNA.

Cyclin-dependent kinase, CDK, CDK/cyclin complex; inhibitory; restenosis; CDK-binding motif; endothelialisation; fusion protein; therapeutic; acne; intracellular; transcettosis; vascular wound; repair; hair; smoth muscle; cardiovascular; arteriosclerotic; fibrotic disorder; cellular proliferation; rheumatoid arthritis; diabetes; cirrhosis; tumour; inflammation; neurodegeneration; periodontal; spermatogenesis; techygardia; human; p27; p16; truncated; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence represents a DNA encoding a human truncated p27/p16 fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       147 T;

The invention relates to novel inhibitors of cyclin-dependent kinases are invention relates to novel inhibitors of cyclin-dependent kinases (CDKs), particularly CDK/cyclin complexes. It provides a recombinant transfection system (A) that complexes. It provides a recombinant comprising a sequence encoding an inhibitory polypeptide containing at least one CDK-binding motif for binding and inhibiting activity of a CDK, linked to a transcription regulator functional in eukaryotic cells; (ii) second gene construct comprising a sequence encoding a polypeptide that promotes endothelialisation, and (iii) a gene delivery composition for delivering the GCs to a cell for transfection. Also provided are nucleic cids encoding a fusion protein (FP) containing: (i) a therapeutic collular process when FP enters the cell, and (ii) a transcellular protein that alters a cellular process when FP enters the cell, and (ii) a transcellular consists of at least one CDK-binding motif and a TCP. See X26220 for detailed uses of the recombinant transfection system. The present consistence represents a DNA encoding a human truncated p27/p16 fusion
  binding motif - used for regulation of cell proliferation and differentiation, for treatment of, e.g. vascular injury, cancers, fibrosis and neurodegeneration
cell proliferation and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGGGCACCAGAGGCAGTAACCATGCCCGCATAGATGCCGCGGAAGGTCCC 1047

This sequence encodes a chimeric polypeptide of the invention. It was claims 13; Page 46-48; 58pp; English.

This sequence encodes a chimeric polypeptide of the invention. It was a this sequence encodes a chimeric polypeptides of the human p27 and p16 cDNA sequences. The chimeric polypeptides of the invention have cyclin-dependent kinase (CDK) binding motifis from at least two different proteins that bind to CDKS.

The protein controls proliferation and/or differentiation of cells, or particularly they inhibit cell-cycle progression. They can be used to creat a wide range of proliferative disorders, e.g. cancer, leukaemia, psoriasis, atherosclerosis, restenosis, chronic inflammation etc. They can also treat diseases associated with de-differentiation or consists and autonomous diseases of the peripheral degeneration of tissue, e.g. Alzhelmer's, Parkinson's or Huntington's diseases, gastric ulcers and autonomous diseases of the peripheral nervous system. Other applications include reducing growth of hair and protecting hair follicle cells against cytotoxic treatments, cosmetically to treat various forms of folliculitis, and to inhibit spermatogenesis or cogenesis. The chimeric proteins can also be used in vitro to maintain cells, especially neurons intended for testing specific activity of trophic factors, at selected points in the cell cycle. The proteins are more active inhibitors of the CDK/cyclin complex than binding motifs used the coll of th
                                                                                                                                        CDK inhibitory fusion protein p16p27 coding sequence.
Fusion gene; CDK inhibitor; cyclin-dependant kinase; p27 gene; p16 chimmeric polypeptide; human; binding motif; proliferation control; cell differentiation; cell-cycle inhibitor; proliferative disorder; tissue degeneration; therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chimeric inhibitor of cyclin dependent kinase - useful for gene therapy of cancer and other proliferative and differentiative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ë
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18
